
Cardo Systems Introduces New S-2™ Bluetooth® Stereo Headphones

Pittsburgh, PA - Cardo Systems, Inc., a leading developer and manufacturer of advanced wireless Bluetooth® devices for the consumer electronics market, announced today its new S-2™ Bluetooth® stereo headphones, the ultimate wireless communication accessory that allows you to enjoy stereo music and access to your Bluetooth® mobile phone in one convenient package. The feature-rich and technologically advanced S-2™ Bluetooth® stereo headphones permit hands-free, voice-controlled operation of your mobile phone and your MP3 player. The comfortable, lightweight and easily adjustable S-2™ headset switches seamlessly between the two at the push of a button. Incoming calls override streaming music, so you will never miss a call.

The S-2™ stereo headphones deliver excellent sound quality, and its ergonomic, user-friendly design simplifies operation. You manage calls and control the MP3 player via dedicated headphone keys that let you pause, change tracks, and adjust the volume without ever having to touch the MP3 player.

The S-2™ lets you initiate or receive mobile phone calls from up to 33 ft (10 m) away from your handset.

The universally compatible S-2 Bluetooth® stereo headset supports A2DP and AVRCP profiles and wireless control of the handset and MP3 player. It provides up to 7.5 hours of talk time and music time, as well as up to 150 hours of standby time, with a mere 3 hours of charging time.

“With the S-2™, we are responding to overwhelming consumer demand for convenience, comfort, style, and quality in a single device. Knowledgeable consumers expect this merging of smart technology and top audio quality from Cardo and its products,” said Abraham Glezerman, Chairman and CEO of Cardo Systems.

The new Cardo S-2™ Bluetooth® stereo headphones will be available beginning June 2007, through Cardo's master distributors and select wireless dealers and retailers. For more information about the s-2, please visit www.cardosystems.com .
